

## Compact Storage Systems Priority Aisle

Compact's system option **Priority Aisle** is a programmable option that offers users productivity gains by automatically opening the most active aisle of a Compact mobile system, whenever the module is inactive for a pre-programmed time interval.

### Benefits

- Design flexibility allows for the inactivity interval and the priority aisle to be changed as the user's needs change.
- Priority aisle can be used to provide ready access to heavily used materials in a particular aisle or to create a through fare through a module that is configured with dual access controls. This allows consistent pathway with additional modules running in parallel.
- Priority aisle allows for any other aisle to be opened when desired.
